

Getting Started with FlowDesk

Welcome to FlowDesk. This guide walks you through the initial setup of your workspace and the basic workflow for managing customer support.

By the end of this guide, you will know how to:

- Create a FlowDesk workspace
- Configure basic workspace settings
- Invite support agents
- Create customer profiles
- Create and assign tickets
- Manage ticket statuses
- Understand the basic ticket workflow
- Set up a simple automation
- Review basic support analytics

Creating a FlowDesk Workspace

A FlowDesk workspace is the central environment where your team manages customers, tickets, automations, and support analytics.

Create your workspace

1. Open the FlowDesk sign-up page.
2. Enter your account information.
3. Choose a name for your workspace.
4. Select your subscription plan.
5. Complete the account creation process.
6. Sign in to your new FlowDesk workspace.

[IMAGE: FlowDesk workspace sign-up screen showing account information fields and workspace name]

Your subscription determines which features and limits are available in the workspace.

Feature	Free	Pro	Enterprise
Maximum agents	3	20	Unlimited
Tickets per month	1,000	10,000	Unlimited

Feature	Free	Pro	Enterprise
API access	No	Yes	Yes
Webhooks	No	Yes	Yes
Advanced analytics	No	Yes	Yes
SSO	No	No	Yes
SLA	No	No	Yes

Note: Pro and Enterprise subscriptions are billed monthly.

Initial Workspace Configuration

After creating your workspace, configure the basic workspace information before inviting your support team.

Configure workspace information

1. Open **Workspace Settings**.
2. Enter or update the workspace name.
3. Review the workspace information.
4. Save your changes.

[IMAGE: Workspace Settings page showing workspace name and general configuration options]

A well-configured workspace makes it easier for agents to identify the correct support environment and begin working with tickets.

Review your workspace access

Before inviting agents, review the access configuration for your workspace.

FlowDesk uses role-based access control to manage access to workspace resources. Give each team member only the access appropriate for their support responsibilities.

Note: SSO is available only on the Enterprise plan.

Inviting Support Agents

Support agents are team members who work with customer tickets.

Invite an agent

1. Open **Team Management** from your FlowDesk workspace.
2. Select **Invite Agent**.
3. Enter the agent's email address.
4. Select the appropriate role or access level.
5. Send the invitation.
6. Ask the invited agent to follow the instructions in the invitation to join the workspace.

[IMAGE: Team Management page with the Invite Agent button and agent invitation form]

The number of agents you can add depends on your subscription plan:

- **Free:** Up to 3 agents
- **Pro:** Up to 20 agents
- **Enterprise:** Unlimited agents

Warning: If your workspace has reached its plan limit, you must remove an existing agent or change your subscription before adding another agent.

Creating the First Customer

Customer profiles allow your team to keep customer information associated with support activity.

A customer profile may contain:

- `customer_id`
- Name
- Email
- Company
- Tags
- Custom fields

Create a customer

1. Open **Customers**.
2. Select **Create Customer**.
3. Enter the customer's name.
4. Enter the customer's email address.
5. Optionally enter the company name.
6. Add relevant tags or custom fields.

7. Save the customer profile.

[IMAGE: Create Customer form showing name, email, company, tags, and custom fields]

After the customer is created, the customer profile can be associated with support tickets.

Creating the First Ticket

A ticket represents a customer support request that your team needs to handle.

Each FlowDesk ticket contains the following information:

Field	Description
ticket_id	Unique identifier for the ticket
customer_id	Customer associated with the ticket
subject	Short description of the support request
description	Detailed information about the request
status	Current state of the ticket
priority	Importance of the ticket
assigned_agent	Agent responsible for the ticket
created_at	Time when the ticket was created
updated_at	Time when the ticket was last updated

Create a ticket

1. Open **Tickets**.
2. Select **Create Ticket**.
3. Select the customer.
4. Enter a descriptive subject.
5. Add details about the customer's request in the description.
6. Select a priority.
7. Save the ticket.

[IMAGE: New Ticket form showing customer selection, subject, description, priority, and assignment fields]

FlowDesk supports four ticket priorities:

- **Low** — The request has minimal urgency.
- **Medium** — The normal priority for routine support requests.
- **High** — The request requires increased attention.
- **Urgent** — The request requires immediate attention.

New tickets use the `open` status as the starting point of the standard ticket workflow.

Assigning a Ticket

Assigning a ticket gives a specific support agent responsibility for handling the request.

Assign a ticket to an agent

1. Open **Tickets**.
2. Select the ticket you want to assign.
3. Locate the **Assigned Agent** field.
4. Select an available support agent.
5. Save the ticket.

[IMAGE: Ticket details page highlighting the Assigned Agent field]

The assigned agent can then review the customer information, investigate the request, and update the ticket as work progresses.

Tickets can also be assigned through FlowDesk automation using the `assign_ticket` action.

Changing Ticket Status

A ticket's status indicates its current position in the support process.

FlowDesk supports four statuses:

- `open`
- `pending`
- `resolved`
- `closed`

Change a ticket status

1. Open the ticket.
2. Locate the **Status** field.
3. Select the appropriate status.

4. Save the ticket.

[IMAGE: Ticket details page showing the status dropdown with Open, Pending, Resolved, and Closed options]

Use statuses consistently so your team can quickly understand which requests require attention.

Basic Ticket Workflow

A typical FlowDesk support workflow can follow these stages:

```
graph TD; A[Customer request] --> B[Create ticket]; B --> C[Assign agent]; C --> D[Investigate and respond]; D --> E["Pending, if additional information is required"]; E --> F[Resolve the request]; F --> G[Close the ticket];
```

Open

Use `open` when a ticket requires attention from the support team.

Pending

Use `pending` when work on the ticket is temporarily waiting for additional information or another action.

Resolved

Use `resolved` when the support request has been addressed.

Closed

Use `closed` when the ticket is finished and no further support work is expected.

The exact sequence may vary depending on your team's support process.

Tip: Use ticket priorities together with statuses. For example, an urgent ticket that is still open should be easy for your team to identify and prioritize.

Introduction to Automation

FlowDesk automation allows teams to trigger actions automatically when specified events occur.

Automation can reduce repetitive manual work, such as assigning incoming tickets or changing ticket priorities.

Supported trigger examples

FlowDesk supports triggers including:

- `ticket.created`
- `ticket.updated`
- `ticket.priority_changed`

Supported actions

Automations can perform actions including:

- `assign_ticket`
- `change_priority`
- `add_tag`
- `send_email`
- `send_webhook`

For example, you could create an automation that assigns newly created tickets to a designated support agent.

Trigger:
`ticket.created`

Action:
`assign_ticket`

[IMAGE: Automation builder showing a `ticket.created` trigger connected to an `assign_ticket` action]

Note: The `send_webhook` automation action requires webhook functionality, which is available on Pro and Enterprise plans.

Introduction to Analytics

FlowDesk provides analytics that help teams understand their support workload and performance.

Available support metrics include:

- **Ticket volume** — The number of tickets handled over a period.
- **Resolution time** — How long tickets take to reach resolution.
- **First response time** — The time taken to provide the first response to a customer.
- **Agent workload** — The distribution of support work across agents.
- **Customer satisfaction** — Customer satisfaction information collected through FlowDesk.

[IMAGE: FlowDesk Analytics dashboard showing ticket volume, resolution time, first response time, agent workload, and customer satisfaction]

Advanced analytics are available on **Pro and Enterprise** plans.

Note: The Free plan does not include advanced analytics.

Troubleshooting Common Onboarding Problems

I cannot add another agent

Check the number of agents currently in your workspace.

- Free workspaces support up to 3 agents.
- Pro workspaces support up to 20 agents.
- Enterprise workspaces support unlimited agents.

If you have reached your plan limit, remove an existing agent or change your subscription.

I cannot find API settings

API access is not available on the Free plan.

API access is available on:

- Pro
- Enterprise

When API access is available, FlowDesk uses Bearer Token authentication.

Authorization: Bearer <API_TOKEN>

The FlowDesk API base URL is:

`https://api.flowdesk.example/v1`

API rate limits are:

- Pro: 60 requests per minute
- Enterprise: 300 requests per minute

I cannot configure webhooks

Webhooks are available only on Pro and Enterprise plans.

Supported webhook events include:

- `ticket.created`
- `ticket.updated`
- `ticket.resolved`
- `customer.created`

Webhook requests are sent using HTTPS POST. Failed webhook deliveries are retried up to 3 times.

I cannot find SSO settings

SSO is available only for Enterprise customers. Free and Pro workspaces do not include SSO.

A ticket is not appearing as expected

Check the following:

1. Confirm that the ticket was saved successfully.
2. Verify that the ticket has the correct customer.
3. Check the ticket's current status.
4. Check whether the ticket has been assigned to the expected agent.
5. Refresh the Tickets page and review the ticket details.

An automation is not performing the expected action

Review the automation configuration:

1. Confirm that the selected trigger matches the event you expect.

2. Verify that the action is configured correctly.
3. Check whether the action requires a plan feature that is unavailable on your subscription.
4. Review the ticket or customer data involved in the automation.
5. Save the automation after making configuration changes.

Next Steps

After completing the initial setup, you can continue configuring FlowDesk for your support team's workflow.

Recommended next steps include:

1. **Add your support team** — Invite the remaining agents who need access to the workspace.
2. **Create customer profiles** — Add customers and maintain their relevant information.
3. **Establish ticket procedures** — Define how your team uses priorities, assignments, and statuses.
4. **Configure automation** — Automate repetitive ticket and customer-support actions.
5. **Review analytics** — Monitor ticket volume, response times, resolution times, agent workload, and customer satisfaction.
6. **Explore integrations** — Pro and Enterprise customers can use API access and webhooks to connect FlowDesk with other systems.
7. **Review security settings** — FlowDesk provides HTTPS, encrypted data transmission, role-based access control, and audit logs.

Your FlowDesk workspace is now ready for day-to-day customer support.
